How to Create a Network Share Via Samba Via CLI (Command-line interface/Linux Terminal) - Uncomplicated, Simple and Brief Way!

This page has been deprecated in favor of the Ubuntu Server Guide at <https://ubuntu.com/server/docs>

Specifically about samba, we have:

- Under <https://ubuntu.com/server/docs/how-to>:
 - How-to guides -> Networking -> Samba: file server, print server, share access controls, and more.
 - How-to guides -> Active Directory integration with winbind: preparing to join a domain, rid and autorid identity mapping backends, simple domains and forests.
- Under <https://ubuntu.com/server/docs/explanation>:
 - Explanation -> Active Directory integration: choosing an identity mapping backend, what are SIDs, which idmap backends to pick under which circumstances, details about the rid and autorid backends.

How to Create a Network Share Via Samba Via CLI (Command-line interface/Linux Terminal) - Uncomplicated, Simple and Brief Way! (last edited 2024-05-05 20:26:14 by ahasenack @ 177.19.27.240.dynamic.adsl.gvt.net.br[177.19.27.240]:ahasenack)
